

Chemistry 1C - Summer 2022

Welcome to Chem 1C! Thank you for joining our community of learners dedicated to supporting each other on our quest to understand the world at the molecular level. We aim to offer a meaningful and empowering experience to every student. We will build that rich experience together by devoting our strongest available effort to the class. We are all on our own paths of knowledge and each have our own reasons for being here. But we all have something to teach our classmates and beyond.

We aim to offer a meaningful and empowering experience to every student in this course. We will build that rich experience together by devoting our strongest available effort to the class. **You will be challenged and supported.** I hope you will take an active, critical, patient, and generous role in your own learning and that of your classmates.

In this time of great uncertainty with anxiety-producing news seemingly non-stop, you may be asking yourself, “why am I here learning about atoms?” When you feel this way, please remember your own reasons for attending college and wanting to study science. **Keep that goal and vision front and center and recognize that every day you study, you are getting one step closer to your dreams.** Chemistry does matter (ask us why!), and your personal development will help you become more qualified and ready to become the leader you want to be. **If there are aspects of this course that prevent you from learning or exclude you, please let me know as soon as possible.** And **when you get overwhelmed, please reach out.** We are happy to work with you to meet your needs and to develop strategies to fulfill the requirements of the course. We are happy to provide you with help and support in any way possible.

In this class, what matters most is that you learn. We take a “growth mindset” approach to learning which means that we know that learning takes time, effort, and strategy. One reason why we love Chemistry is that it builds on itself. So, when you show improvement, we reward that improvement.

We look forward to working with you for the next 5 weeks! We promise to do our best every day and know that you will do the same.

Sincerely,

Dr. John Diniz and the Chem 1C Teaching Team

How will this class work?

Our lectures will take place in J Baskin Engineering in room 152 on Mondays and Wednesdays from 1:00-4:30PM. These sessions will be recorded and posted to our course canvas site.

You can participate in optional Discussion Sections with our TA Alex Smith ~~via zoom~~. These sections (limited to 24 students; first come-first served) will be collaborative and you will get to know Alex and your fellow students. Discussion Sections ~~will occur on Tuesdays and Thursdays~~, with different content each day. ACE sections are available for Chem1C: I encourage you to look at the [ACE website](#) and consider applying to this award-winning program.

ALEKS will be used for all homework assignments called "Objectives" and will be due every Tuesday and Thursday (Weeks 2-5). There will be three Knowledge Checks (a type of ungraded quiz) so you can make sure you are retaining what you are learning. **Please work on ALEKS each day. Plan to spend at least 15 hours on ALEKS per week during the summer.** Your final ALEKS score will be based on how much of your ALEKS pie is complete by the end of the term. You are welcome to earn "extra credit" for completing ALEKS Objectives on time.

Please check our canvas page often. We will have Weekly Study Guides with tips on how to work with ALEKS as well as sections of the book to review before class. We will not be going through the textbook sequentially, so these Study Guides will help you figure out what we are learning, why, and what we will do with it. Also, you will find a page each lecture organized chronologically, with the lecture slides that you can print out or download before class and then use them to take notes during class. I will also post the annotated slides here too. There is a rough schedule for what we will cover each week on the last page of this document.

Following schedule is under construction. Discussion sections, ACE sections, MSI SGT times, and Open Tutoring/Office Hours of other teaching team members will be added.

Monday	Tuesday	Wednesday	Thursday	Friday
1:00pm-4:30pm: Lecture with Dr. Diniz		1:00pm-4:30pm: Lecture with Dr. Diniz		

Course Description

Chem 1C is one of three courses that makes up the general chemistry sequence at UCSC (Chem 1A-1B-1C). In Chem 1C, we will learn the following:

- Recognize how energy flow controls the outcome of a chemical reaction.
- Develop a quantitative understanding of why a reaction goes forward or backward or not at all.
- Utilize electrochemical potentials to predict reaction outcomes.
- Analyze the forces attracting molecules to one another.
- Know the microscopic structures of pure solids, liquids, and gasses.
- Predict outcomes of the solution processes by knowing the physical properties of solutions.
- Solve problems involving nuclear decay processes and mass to energy conversions.

Teaching Team

Instructor

Dr. John Diniz

jdiniz@ucsc.edu

Teaching Assistant (TA):

Alex Smith

placeholder@ucsc.edu

ACE Learning Skills Advisor:

Jorge Ruiz Gonzalez

jolruiz@ucsc.edu

MSI Learning Assistant:

Place Holder

Placeholder2@ucsc.edu

Please communicate with your Teaching Team via email, not Canvas message.

Note on Emails

I will check my email at least 2x a day. You can expect to receive a response within 12 hours during Mon-Fri 9:00-5:00pm.

Nighttime emails might not be answered until morning and weekend emails might not be answered until Monday. With that in mind please, feel free to email me anytime, any day of the week.

Required Materials

1. **Computer/tablet and internet:** You will be completing online assignments in ALEKS and other platforms. Please look at the Keep Learning website <https://keeplearning.ucsc.edu/> or contact Dr. Diniz if you have issues accessing this class.
2. **ALEKS:** We will use this Web-based, artificially intelligent assessment and learning system for out-of-class work – go to canvas and click on ALEKS in left sidebar menu. **You get 2 weeks of FREE access** (with the Temporary Access code below) so use it to see how the system works and then decide if you want the e-textbook

Class code: **C4VGD-GLTDM**

2-week Temporary ACCESS code:
C4BA6-F36AA-6F591-81780

There are two options for purchasing ALEKS: with and without an e-textbook. The ALEKS system comes with detailed explanations for every question. I will also post a study guide for the class that will direct you to relevant sections of a free general chemistry textbook called [OpenStax Chemistry](#), 2nd edition.

Prices for purchasing through BayTree Bookstore

- a. **\$45.15: ALEKS + e-textbook (package called ALEKS 360), *Chemistry: The Molecular Nature of Matter and Change* by Silberberg**

- and Amateis, 9th edition. You can view the book by clicking on the sidebar menu (three parallel lines image located on top left corner of page)
- b. **\$26.25: ALEKS only**

Prices for purchasing directly from ALEKS

- c. 6-week ALEKS 360 (includes eBook) = **\$48.76**
- d. 6-week standalone (no eBook) = **\$20**
3. **Scientific calculator** Using your phone as a calculator is not recommended as you will not have access to your phone during Quizzes. A calculator that processes *log* and *ln* functions is helpful for chemistry. The TI-30X IIS Scientific Calculator is a good option because it shows entries on the top line and results on the bottom line. You can get one online for about \$15. ALEKS also has a fantastic calculator built-in to the system but getting used to using your own will help you prepare for the Quizzes. A programmable calculator is not necessary.

(Syllabus Continues on Next Page)

Grading in Chem 1C

Grading Philosophy for this class: We believe that everyone can learn chemistry. We recognize that your performance will be affected by your prior knowledge and many circumstances outside of your control (especially when we are learning chemistry during a pandemic!). We know that **it takes time to learn** and give you many opportunities to show that you are learning.

Your grade is what you earn. **We do not curve grades** because we don't want your grade to change based on how others in the class performed. **You are not competing with anyone.**

Assessments

35% ALEKS (based on ALEKS Pie completion) - complete by Sunday, July 24 at 11:59PM
30% Quizzes (2 Quizzes)
25% Final Exam
10% Essays (2 essays)

Letter Grades

Letter grades will be assigned according to your total percentage score that incorporates all items above.

A+: 96 and above%	B+: 85-87%	C+: 73-77%	C-: 60-65%
A: 90-95%	B: 80-84%	C: 65% -72%	D: 50-59%
A-: 88-89%	B-: 78-79%	C grade is minimum grade to take any classes that have 1C as a prerequisite	F: 49 and below

ALEKS Objectives (aka Homework) - see Canvas "Info on ALEKS" Module

ALEKS is the online learning system we will use in this class. The value of this program is that you get instant feedback on your work, along with support on each question. We use ALEKS because there is an explanation for every question posed. After you get three questions correct in a row, you have proved that you have learned a topic and can move on to the next topic.

See the Canvas Module "Info on ALEKS" to figure out what all the ALEKS terms mean: topic, objective, pie, knowledge check, etc.

How is my ALEKS grade calculated?

Your ALEKS grade will be based on "completing your ALEKS Pie" by the end of the term. There are no extensions on Objectives. The grade is structured this way because the most important part is trying to learn all the ALEKS topics. The deadlines for Objectives are there to help you move at a reasonable pace through the class.

How do I catch up? (The days of the week might shift around as we approach Session II) Starting in Week 2, we don't have any Objectives open from Saturday to Monday every week. During this time, you can work on any topics you are "ready to learn" including those that were previously not learned. You can also review content in prior Objectives or work ahead on topics for future Objectives. This is also possible when you finish an Objective early. There are no "extensions" on ALEKS, but even if someone does not complete a single Objective on time, they can still get 100% on ALEKS.

ALEKS is not a platform that allows you to "cram" so please make sure you are working on ALEKS every day. During a normal 10-week quarter, students spend an average of 8-9 hours/week. During the summer, this will be about 15 hours/week. A list of the Topics by Objective is found in the "Chem1C: ALEKS Topics per Objective". After Week 1, ALEKS Objectives will be due every Tuesday and Thursday at 11:59PM.

EXTRA CREDIT: Finishing ALEKS Objectives on time will earn extra credit. You can earn up to 10% extra credit (1% for each objective) for your ALEKS score.

Knowledge Checks

Knowledge checks are **ungraded** quizzes that help to see if you are retaining what you learned. If you answer a question incorrectly, you may be required to go back and review that topic. **There will be two Knowledge Checks in ALEKS that will occur after you complete Objective 5 and after you complete Objective 11.** When a Knowledge Check comes up, you can't do anything in ALEKS until you complete the Knowledge Check. DO NOT mark "I don't know" for all the questions just to get through the Knowledge Check fast. This will result in you having to go back and learn a lot of topics again. If this happens, e-mail Dr Diniz and he will reset the Knowledge Check so you can show that you mastered

those topics. You can always ask Dr. John Diniz to assign you a knowledge check, which many pro-active students do before Quizzes.

Quizzes and Final Exam

We will have 2 Quizzes – see schedule at the end of the syllabus for dates. The Final Exam will be about 2 hours. Some questions will be taken from ALEKS and some will be more conceptual. **Each quiz/exam is cumulative**, with more emphasis on new material. The Final Exam will be approximately two-thirds new material since Quiz 2 and one-third old material.

What if I miss a Quiz?

There are no make-up quizzes. Put the dates of quizzes on your calendar now. If you know that you are unable to make a quiz ahead of time, you need to email Dr. Diniz to make arrangements to take the quiz at an earlier time or date. If you miss a quiz because of circumstances beyond your control, then email Dr. Diniz immediately to discuss how your grade for the quiz will be made up. **your final exam score will be used as the score on the missed quiz.**

~~Chemistry and Life Essays~~

~~(Details to be added)~~

How much time should I spend each week on Chem1C?

During a normal 10-week quarter, a 5-credit course assumes a median workload of 15 hours per week, depending on your prior knowledge of chemistry. During the summer, this will be about 30 hours/week. For this course, estimates of the weekly workload are:

- 7 hours: Attending Lecture (required)
- 15-20 hours: Completing ALEKS Assignments (required)
- 2 hours: Attending Discussion Section (optional)
- 2-6 hours: reviewing material for Quizzes

Learning Outcomes

By the end of this course students should be able to

1. Understand topics including energy flow, reaction direction, electrochemical reactions, intermolecular forces, structures of matter in the three major phases, chemistry of solutions, and the nuclear decay process.
2. Use critical and practical thinking to analyze and evaluate chemistry problems. Students should be able to answer questions about chemistry by analyzing the problem, identifying the relevant topics and applying their understanding of those topics to arrive at a solution. Students will be able to test this answer for correctness and be able to interpret and communicate their results.
3. Recognize how each topic builds upon cumulatively such that the final topic,

equilibria in the gas and liquid phase, requires students to exercise their full set of knowledge and techniques to arrive at solutions.

4. Collaborate effectively with their peers to solve problems and interact productively with a diverse group of classmates.
5. Connect course chemistry topics with the real world to understand how chemistry is relevant to our lives.

Commitment to Equity

This course is meant to be a safe learning space for EVERYONE, regardless of race, ethnicity, background, prior science experience, sexual orientation, gender, pronoun choices, etc. Any violations should be reported to the Teaching Team and will be dealt with appropriately. The design of the lectures and assessments are meant to give everyone the opportunity for success.

Resources for Success in Chem 1C

Open Tutoring (Office Hours)

Attending Open Tutoring is a great way to get individualized help and learn about where this class is going. My Open tutoring will be held in Physical Sciences Building 150. ~~Times and locations of Open Tutoring is TBA.~~ If these times don't work for you, please email one of us and we can find a time to meet ~~virtually~~. **Open Tutoring is a great time to work on ALEKS questions with us!**

Discussion Sections

During Discussion sections, the TA will review material and design activities to help you test your knowledge. They will also discuss study strategies that will help in all your chemistry courses. You will also work on questions that will be remarkably similar to ALEKS, Quizzes, and the Final Exam. This is a great time to ask questions, test out study groups, and work with your peers.

Disability Resource Center (DRC)

UC Santa Cruz is committed to creating an academic environment that supports its diverse student body. If you are a student with a disability who requires accommodations to achieve equal access in this course, please submit your Accommodation Authorization Letter from the Disability Resource Center (DRC) to me as soon as possible in the academic quarter. **Please share with me ways we can ensure your full participation in this course.** I encourage all students who may benefit to learn about the DRC and the UCSC accommodation process. You can visit the DRC website at drc.ucsc.edu. You can make an appointment and meet in-person with a DRC staff member. The phone number is 831-459-2089, or email drc@ucsc.edu.

Students that have been approved for extra time on tests will receive an email from the Physical and Biological Sciences (PBSci) Testing Center (testing.pbsci@ucsc.edu) with information on where their proctored tests will take place.

MSI Sections and Small Group Tutoring (SGT)

[Small Group Tutoring](#) is for everyone and open to all students in class to get extra practice on the things you already know or the things you want to know better. One-

hour SGT sessions are offered at least three times each week for the entire quarter. Attendance is voluntary; however, students who attend sessions weekly tend to earn a higher final grade than students who do not participate.

Want to be successful with SGT? Bring your books, lecture notes, questions, and be open to working collaboratively with your peers. Please check out the [Learning Support Services website](#) for more information on [other programs](#) LSS offers to support student success, or visit us in person at the ARCenter or remotely at our [Virtual Front Desk](#), M-F 9am-6pm.

Who is the tutor? Small Group Tutors are undergraduate students who took the class, did well, and are trained to facilitate group sessions to focus on you, the students, and what you need to succeed in the course. LSS provides continuous training for our tutors to create inclusive spaces for students and facilitate group work effectively.

How do you access services?

- **SGT** requires you to sign up for sessions with 24-hour advanced notice on [TutorTrac](#) and commit to attend each week for the quarter.
- Each 1-hour SGT session has a max of 6 students, and the Small Group Tutor goes to your class/watches the videos for your class.
- **Sessions will be provided in person and via Zoom in Summer 2022.**

You can access the schedules on [TutorTrac](#) using [these instructions](#). All students can view the schedule and begin signing up for sessions on **Monday, July 25th**, and sessions will begin **Wednesday July, 27th**.

Academic Excellence Program (ACE)

ACE is a nationally recognized academic support program that is designed to increase the diversity of students who earn bachelor's degrees in science, technology, engineering, and mathematics (STEM).

The sessions provide a structured setting where students teach and learn from each other. An ACE session leader, who has an academic background in the subject, facilitates the problem-solving sessions. Undergraduate co-leaders/peer mentors assist, bringing the student-to-teacher ratio to approximately 12:1. In addition to attending their ACE problem-solving sessions, students meet weekly with their peer mentor, who shares study strategies as well as opportunities for undergraduate teaching and research internships. ACE session leaders offer weekly office hours, as well as examination review sessions and academic and career planning. ACE students join a community of STEM scholars who are dedicated to academic excellence and success.

Enrollment in ACE is limited, and priority is given to EOP students who are planning to pursue a STEM major. For more information, visit the ACE website.

Campus Advocacy, Resources, and Education (CARE) Office

The UCSC [Campus Advocacy, Resources & Education \(CARE\) Office](#) believes that all people deserve to live and engage in an environment free from violence. The CARE program provides support, advocacy, resources and violence prevention education to the UC Santa Cruz community. We respond to the needs of students, staff, faculty and non-affiliates impacted by stalking, dating/domestic violence and

sexual assault by providing free and confidential services.

Title IX prohibits gender discrimination, including sexual harassment, domestic and dating violence, sexual assault, and stalking. If you have experienced sexual harassment or sexual violence, you can receive confidential support and advocacy at the Campus Advocacy Resources & Education (CARE) Office by calling (831) 502-2273. In addition, Counseling & Psychological Services (CAPS) can provide confidential, counseling support, (831) 459-2628. You can also report gender discrimination directly to the University's Title IX Office, (831) 459-2462. Reports to law enforcement can be made to UCPD, (831) 459-2231 ext. 1. For emergencies call 911.

Faculty and Teaching Assistants are required under the [UC Policy on Sexual Violence and Sexual Harassment](#) to inform the Title IX Office should they become aware that you or any other student has experienced sexual violence or sexual harassment.

Slug Support Program

College can be a challenging time for students and during times of stress it is not always easy to find the help you need. Slug Support can give help with everything from basic needs (housing, food, or financial insecurity) to getting the technology you need during remote instruction.

To get started with SLUG Support, please contact the Dean of Students Office at 831-459-4446 or you may send us an email at deanofstudents@ucsc.edu.

Slug Support/Tech Services

The ITS Support Center is your single point of contact for all issues, problems or questions related to technology services

and computing at UC Santa Cruz. To get technological help, simply email help@ucsc.edu.

Academic Integrity

All members of the UCSC community benefit from an environment of trust, honesty, fairness, respect, and responsibility. You are expected to present your own work and acknowledge the work of others in order to preserve the integrity of scholarship.

Academic integrity includes:

- Following exam rules
- Using only permitted materials during an exam
- Viewing exam materials only when permitted by your instructor
- Keeping what you know about an exam to yourself
- Submitting your own original work

Academic misconduct includes, but is not limited to, the following:

- Disclosing or sharing exam content during or after you have taken an exam
- Accessing exam materials without permission
- Copying/purchasing any material from another student, or from another source, that is submitted for grading as your own
- Violations of the Academic Integrity policy can result in dismissal from the university and a permanent notation on a student's transcript. For the full policy and disciplinary procedures on academic dishonesty, students and instructors should refer to the [Academic Misconduct page](#) at the [Division of Undergraduate Education](#).

In Chem1C, you are not allowed to consult with any person or website for

help on Quizzes or Exams. We are happy to help you with ALEKS anytime.

Please be patient with your learning. This is just the beginning of your college career. Learning and mastering the material should be your goal for this class, not a specific letter grade. Chemistry builds on itself, so something that you might not fully understand in Chem1C might make more sense to you in Chem1B, 1N, 8A, 8L, 139, 163A, 163B, and 164.

Weekly Schedule (You are invited to print this out)

There is a canvas module for each week that includes a study guide with details on what we are learning and how it fits into the class, suggested sections of the book to preview, tips on solving ALEKS questions, and more. This class does not follow the sequential order of the textbook so it is important to look at the study guide to figure out how to prepare for lecture.

Week	Topics to be covered
Week 1	Intermolecular Forces and Phase Changes (Ch. 12.1-12.3) Energy Change: heat and work; system vs surroundings (Ch. 6.1) Thermochemistry: Enthalpy (Ch. 6.2) Enthalpy calculations (Calorimetry and Hess's Law; Ch. 6.3-6.6)
Week 2	Wednesday (8/3): Quiz 1: Enthalpy Applied enthalpy calculations: Vapor pressure and enthalpy of vaporization (12.2) Heats of hydration (13.3) Entropy (20.1-20.2)
Week 3	Friday (8/12): Essay 1: "Chemistry and You" is due Gibbs Free Energy, Spontaneity, and Equilibrium (20.3-20.4) Apply Free Energy to solubility of ionic compounds (K_{sp} , 19.3)
Week 4	Wednesday (8/17): Quiz 2: Enthalpy, Entropy, and Free Energy Electrochemistry: Redox reactions and Galvanic Cells (21.1-21.3) Calculating the potential for nonstandard electrochemical cells (21.4) Electrolysis (21.7)
Week 5	Monday (8/22): Essay 2: "Chemistry and Life" is due Nuclear decay reactions and half-life (24.2) Gas Solubility (13.4) Colligative Properties (13.6) Wednesday (8/24): Final Exam (covers everything learned in the class)
